

## Spring 2025 Continuity

Job Title: Safety Team

Immediate Chain:

→ Wing Commander  
→ Chief of Staff  
→ A1/2  
Safety team

Area of Responsibility:

Creating RAMs monthly from Cadre.  
Being present at all PMT events with all safety equipment.  
Assisting cadets with any injuries or sickness during PMT events.

Weekly Flow:

Monthly RAMs do by end of the month.  
Safety for all PMT events.  
Assisting cadets from throwing up to passing out at PT can vary.  
Reaching out to commander about equipment needed like liquid IV.

**Struggles I Experienced:**

1. Watching 200+ cadets with only 2 safety officers.
2. Not having all the needed equipment.
3. Having RAMs given late in the month.

**How Did I Address the Struggles?**

1. Asked other cadets to keep an eye out for injuries.
2. Tell cadets to stop dangerous activities.
3. Reached out to A1/2 commander for faster communication.
4. Decided who would send finished RAMs report to cadre.

Advice:

- Take charge when in charge of safety, to make sure everyone stays safe.
- Make sure to keep extra inventory of equipment so you don't run out.
- Reach out to LLAB in case you are needed for LLAB or extra activities such as LRCs or other Events.

## **RAM Report – March 20, 2025**

**Location:** University of Texas at San Antonio, Detachment 842

**Prepared By:** C/Jackson, Javohn, Force Protection Flight Officer

**Date:** March 20, 2025

### **1. Overview**

As part of the March Safety/Antiterrorism (AT) Action, facility managers will conduct a check of all access points to rooms/areas containing HVAC systems and backup generators, ensuring no tampering has occurred and that they are secure during their tour of duty.

### **2. Inspection Schedule and Documentation**

Time Observations

1100 An initial sweep of the honor building. No suspicious activity, items, or litter around.

1200 No significant changes were observed. Clear sky overcast.

1430 Still there are no significant changes other than the addition of litter on the HVAC site.

1530 More foot traffic in the area due to Tobin garage

### **3. Observations & Findings**

- HVACs: All observed systems remained untampered with no visible signs of forced tampering, or unauthorized access.
- Personnel: No individuals were loitering or exhibiting suspicious behavior in or around.
- Unattended Items: No suspicious packages, baggage, or unattended items were found.
- Environmental Conditions: Clear weather. Visibility remained clear for all inspections.
- Overall Security Status: No security threats or suspicious activities detected.

### **4. Recommendations**

- Continue conducting RAM checks at random intervals to ensure unpredictability.
